PROJECT DESCRIPTION

The Merrimac Way Street, Sidewalk, and Bicycle Facility Project will design improvements that include multi-use paths and cycle tracks on Merrimac Way between Harbor Boulevard and Fairview Road. Pedestrian improvements will be designed to provide continuous sidewalks on Merrimac Way as part of this project. The proposed multi-use paths will provide on and off-street bicycle facilities, separated from adjacent vehicular traffic. The project design scope also includes plans for rehabilitation of the street including new pavement, curb/gutter, median realignment, landscape, and Americans with Disability Act (ADA) improvements.

City staff have worked with the Orange Coast College (OCC) on this project and scheduled a neighborhood meeting for public input in January 2019. The project was presented to the Bikeway and Walkability Committee in December 2018.

The City is pursuing grant funds for the construction phase of the project.
